

Harrisburg International Airport use **Repeat Signage** to display information and track shuttle buses for travellers

“Here at Harrisburg International Airport we are using the Repeat Signage software to display a service that tracks our shuttle busses. The company DoubleMap provides a live feed Via a web site portal. Unfortunately the map and information was very plain. Then we found Repeat Software Ltd. Their Repeat Signage software allows us to display the site inside of a presentation.” Justin McNaughton, Information Technology Specialist, Harrisburg International Airport, Central Pennsylvania, USA. www.flyhia.com

HIA Long Term Parking Shuttle Tracker

“Using the tools, we were able to place a banner across the top showing our passengers what this map is. We were able to add useful information like the time and date. As well as a personal scrolling message. But most importantly we were able to add text overlays to the map showing people where they are and where our long term parking is. The Repeat Signage software was easy to use and operate. We were able to create a presentation in minutes that looked very high quality and professional.”

Repeat Signage success story

“With touch screen support our marketing department is looking for other ways we can use the software around our terminal.

Support has been excellent and I have never been disappointed. Quick response times along with personal service, rates this company very high in my personal satisfaction. I have, and will continue to recommend this company to others.” Justin McNaughton, Information Technology Specialist, Harrisburg International Airport, Central Pennsylvania. www.flyhia.com

Tech stuff: We are running the presentation on an HP 4000pro slim. Exporting the image out an HDMI port at a resolution of 1440x900. We then use NTI HDMI - RJ45 converters to push the image to an outdoor monitor over 500 feet away and 1 floor away. The monitor is located at our curb shuttle bus loading and unloading zone.

Repeat Signage 2015 is easy to use, professional, digital signage software that helps you get your message across and promote your products and services. You just need a Windows based PC, a desktop or large format display screen and Repeat Signage. It is easy to use and you can have a presentation playing in minutes. Features include touch screen support, remote updating and scheduling of presentations, and it supports Windows 8/8.1, 7, Vista and XP. Outstanding level of support. [Trial download](#)
