Pacific National is the largest rail forwarding company in Australia.

The Bulk Services Division is responsible for all bulk products within the business. Pacific National transports coal, grain and industrial products in NSW and Victoria. It delivers approximately 95 million tonnes of coal per annum by rail to both domestic and export markets.

The Intermodal Division transports containerised freight on the interstate network and the narrow gauge networks in Queensland. It provides rail freight and terminal services to freight forwarders, steel manufacturers and provides haulage services for passenger trains, the Ghan and the Indian Pacific.

NR52 and NR30, the two NR class locos painted in Aboriginal design, haul the Indian Pacific at Newbridge, near Bathurst, NSW.

"Around Australia in the Locomotive Drivers Depots, to keep the staff up to date with Business, Safety has been a challenge. The Adelaide Drivers Depot has been using Repeat Signage, with very good results. Having the ability to have changing scenarios, updating remotely, has been excellent. Before it was just PowerPoint rolling through the screen, now I can mix and match scrolling text with the RSS feeds etc." Len Smith, Pacific National.

Repeat Signage is professional, easy to use digital signage software for Windows.

Repeat Signage Standard and Professional editions allow you to schedule your presentations for viewing at different times of the day and week. You can update remotely over the Internet, ideal for when you have display screens in retail stores, offices or depots across a region or worldwide. Touch screen capable, Repeat Signage has online training and online help menu.

You can download Repeat Signage trial version: [www.repeatsoftware.com](http://www.repeatsoftware.com)

RepeatServer.com lets you create your own RSS feeds and update these via the Internet, plus there are over a thousand images for you to download to use in your signage presentations.
